Of the Eclipses of the Luminaries, which happen in this Year, 1687.

IN this Year 1687, there will be but two Eclipses, and both of the Sun. The one of them happens before the Sun's Apogæon, and the other after it, and both of them almost Central; so that there can be no Full Moon Eclipse in this Year. Yet Argol is of opinion that the Full Moon on May 17. In the Morning may be Eclipsed. But time will prove the contrary.

The first Eclipse of the Sun will be on ~~May~~ the first day, a little after noon, in twenty one degrees of Taurus, among the Pleiades, a turbulent Constellation. It will be a great Eclipse: and so saith Argol. It is within a degree of the North Node, and visible.

The second will be on October the twenty sixth day, about six of the Clock in the Morning: it happens in the thirteenth degree of Scorpio, near the Stars of the Balance. This will be a great Eclipse also, but not perceptible to us, it being almost over before the Sun rises to us in SCOTLAND. It falls very near to the Moons South Node, and therefore the more remarkable for its Magnitude and Effects.

A D V E R T I S E M E N T.

THESE are to give notice to all concerned, that there are two New Fairs granted this Year by His Majesty to the Royal Burgh of Dumfermling, viz. The first upon the 20 day of July, and the other upon the 22 day of October; where are to be sold all sorts of Linnen-Cloath, and Dornick; as also Horse, Nolt, and Sheep, with all other Merchandise, &c. With a Weekly Market.

The Anatomy of Mans Body, as it is governed by the Twelve Signs of the Zodiack.

There are seven Planets in Hea en whose
Names and Characters are these follow-
ing, viz.

Saturn $\overline{\text{H}}$, Jupiter $\overline{\text{Z}}$, Mars $\overline{\text{X}}$, Sol \odot , Venus G , Mer-
cury G , and the Moon C .

There are also several Aspects, amongst which the An-
cients observe these five especially viz. The Conjunction (thus
Charactered δ ,) Sextile $*$, Quartile \square , Trine \triangle , and
Opposition \circ .

Besides these there are other two Characters, viz. The
Dragons Head V and Dragons Tail, A which are neither
Planets, nor Signs, but only the (true) points of Interjecti-
on of the Moons Orb with the Ecliptique.

The

The four seasons of this Year 1687.

1. The Spring Season.

THe Spring begins on Thursday the 10 day of March, the Sun entering the Æquinoctial Sign Aries, making our days and nights equal.

2. The Summer Season.

THe Summer begins on Saturday the 11 of June, the Sun entering the Tropick Sign Cancer, making our days longest, and nights shortest.

3. The Autumn, or Harvest Season.

Autumn or Harvest begins on Tuesday, September 13, the Sun entering into the 2d. Æquinoctial Sign Libra, making again our days and nights equal.

4. The Winter Season.

The Winter Season begins on Sunday, December 11, the Sun entering Capricorn, making the shortest day and longest night.

A Tide Table for Leith. The Use.

Seek the Moons Age in the first and second Column of the Table, and in the two last Columns you have the true time of full Sea at Leith.

Example.

To find the full Sea the 7 day of July 1687. I find the Moons Age by the following Table to be 8. which I find in the first Column of this Table, and over against it in the last Column I find 7 Hours, 39 Minutes, which is the true time of the full Sea required.

A

A ready Table shewing the Age of the Moon every Day throughout this year, 168.
